

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Previously presented) A digital history system, comprising:
a first data store comprising multimedia files having historical information wherein the multimedia files are generated by at least one multimedia application program;
a second data store comprising schedule data wherein the schedule data is generated by an application program that is a different application program than the at least one multimedia application program; and,
at least one memory comprising:
a set of computer readable instructions that, when executed by a processor, correlate selected multimedia files from the first data store with selected schedule data from the second data store by associating the historical information of the multimedia files with the schedule data;
and
a set of computer readable instructions that, when executed by a processor, provide, by way of a network connection, information indicative of the correlated multimedia file relative to the schedule data such that the multimedia files may be arranged temporally.
2. (Previously presented) The digital history system as recited in claim 1 wherein the multimedia files comprise at least one of an audio file and a video file.
3. (Previously presented) The digital history system as recited in claim 1 wherein the multimedia files comprise a text file.
4. (Previously presented) The digital history system as recited in claim 1 wherein the historical information comprises time information associated with the multimedia files.
5. (Previously presented) The digital history system as recited in claim 4 wherein the correlation is based upon a second correlation factor.

6. (Previously presented) The digital history system as recited in claim 5 wherein the second correlation factor is location.

7. (Previously presented) The digital history system as recited in claim 6 wherein the location is a function of latitude and longitude.

8. (Cancelled)

9. (Previously presented) The digital history system as recited in claim 1 wherein the network connection comprises an Internet connection.

10. (Previously presented) The digital history system as recited in claim 1 wherein the correlation is based upon a probability that the selected multimedia files are related to an event indicated by the selected schedule data.

11. (Previously presented) The digital history system as recited in claim 1 wherein the correlation is based upon a clustering.

12. (Previously presented) A method for providing information about a past event, comprising:

providing a first data store comprising media files having an associated time of creation wherein the media files are generated by at least one application program;

providing a second data store comprising records having an associated time function wherein the records having the associated time function are generated by an application program that is a different application program than the at least one application program that generated the media files;

correlating selected media files with selected records as a function of the time of creation of the media files and the time function associated with the records; and

providing information indicative of the selected media files and the selected records for temporal presentation to a user.

13. (Original) The method as recited in claim 12 wherein the media files comprise image data.

14. (Original) The method as recited in claim 12 wherein the media files comprise audio data.

15. (Original) The method as recited in claim 12 wherein the media files comprise text files.

16. (Original) The method as recited in claim 12 wherein the second data store comprises calendar data.

17. (Original) The method as recited in claim 12 wherein the act of correlating comprises determining a probability that the function of time indicates that the media files have an association with the selected records.

18. (Original) The method as recited in claim 17 wherein the act of correlating further comprises correlating the select media files with the selected records in time and space.

19. (Original) The method as recited in claim 18 wherein the correlation in space is a function of a geographic location data associated with the selected media files and geographic location data associated with the selected records.

20. (Original) The method as recited in claim 12 wherein the method is provided as a network service over a network connection.

21. (Original) A computer-readable medium bearing computer-readable instructions for carrying out the acts recited in claim 12.

22. (Previously presented) A computer-readable medium having stored thereon computer readable-instructions for providing a network service, comprising:

accessing a first data store comprising media files having an associated time of creation wherein the media files are generated by at least one application program;

accessing a second data store comprising records having an associated time function wherein the records having the associated time function are generated by an application

program that is a different application program than the at least one application program that generated the media files;

correlating selected media files with selected records as a function of the time of creation of the media files and the time function associated with the records;

providing information indicative of the selected media files and the selected records for presentation to a user as a function of an event having an associated time.

23. (Original) The computer-readable medium as recited in claim 22 wherein the act of accessing comprises reading data from one of the first data store and the second data store over a network.

24. (Original) The computer-readable medium as recited in claim 22 wherein the media files comprise image data.

25. (Original) The computer-readable medium as recited in claim 22 wherein the media files comprise audio data.

26. (Original) The computer-readable medium as recited in claim 22 wherein the media files comprise text data.

27. (Original) The computer-readable medium as recited in claim 22 wherein the second data store comprises calendar data.

28. (Original) The computer-readable medium as recited in claim 22 wherein the act of correlating comprises determining a probability that the function of time indicates that the media files have an association with the selected records.

29. (Original) The computer-readable medium as recited in claim 28 wherein the act of correlating further comprises correlating the select media files with the selected records in time and space.

30. (Original) The computer-readable medium as recited in claim 29 wherein the correlation in space is a function of a geographic location data associated with the selected media files and geographic location data associated with the selected records.

31. (Original) The computer-readable medium as recited in claim 22 wherein the method is provided as a network service over a network connection.

32. (Original) The computer-readable medium as recited in claim 22 wherein the first data store comprises data from a first application and the second data store comprises data from a second data store.
